**Part III DETAILED ACTION**

**Notice to Applicant(s)**

1. This application has been examined. Claims 1-6 are pending.

***Information Disclosure Statement***

2. The references listed in the Information Disclosure Statement dated 3/29/01 have been considered by the Examiner and is attached to this Office Action.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawano (U.S. 6,341,286).

With respect to claims 1-6, Kawano discloses a method for printing a computer generated report (column 3, line 63 to column 4, line 5) including a header section (310) presenting a first set of information, a parts sections listing one or more line items (figure 3), and a footer section presenting a second set of information (figure 3), comprising printing a first report page including the header section, a first parts subsection listing a first quantity of line items (column 3, line 63 to column 4, line 5), the first quantity being less than or equal to a first number, and the

Art Unit: 2626

footer section (the line items can only be equal to the maximum line items that that page is capable of holding.

Kawano differs from claims 1-6 in that he does not clearly disclose printing a second report page when a total quantity of line items listed in the parts section exceeds said first number, said second page including a header subsection presenting a portion of the first set of information, a second parts subsection listing a second quantity of line items, said second quantity being less than or equal to a second number, and a footer subsection presenting a portion of the second set of information. However, it is notoriously well known that in generating a document, when the capacity of a first page has been attained, the continuing information being inputted into the document is automatically inputted into a second page. Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Kawano wherein the if the information being inputted into the report (figure 3) exceeds the capacity of one page, a second or third subsequent page would be used to accommodate the added line items. This would ensure that all of the users' line items are printed.
